Accurate feeding of advertisment into your existing Carton gluing machine

As a member of the ECMA organisation, we are pleased to sending you the attached information about our new product:

FRICTON FEEDER

AFS-300 AdvancedFeeder Servo

The flexible friction feeder **AFS-300 AdvancedFeeder Servo** can be integrated into your existing carton gluing machine and advertisements / printed inserts can be fed with high accuracy (Feeding accuracy +/ 1 mm depending on product & speed) onto the carton.

Inserts, flat and folded products, CDs and other 3D-products can be fed automatically and economically, fixed and glued into your machine.

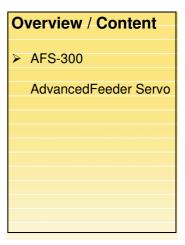

Advantage of the device is the **high user friendliness**, e.g: the central gap adjustment with only 2 digitised setting parameters and thus the **fast changeover time** as well as the feeding of products with a height of **30 mm**.

Our strength is the **customized adjustment** of the feeder (magazine load of the product, exit extension, feeding width etc.) and the integration of the Servo Friction feeder – **tailor-made** into your existing carton gluing machine.

In the past, we already realized numerous projects with the predecessor model - LHP Servo.

Comply with the individual wishes of your customers with regards to the affixing of advertisement – automate your machine with the friction feeder **AFS-300 AdvancedFeeder Servo** from Köra-Packmat.

We would be pleased to present this technology to you in your factory. Therefore, please arrange an appointment with our feeder Sales assistant: Ms Benner, Phone: +49 741 9283 22.

Fasturas
Features:
> Format:
cartons:
Min. 25x60mm,
,
Max. 300x335 mm
> Speed:
cycled:40-60 cycles/Min.
continuously:
120–160 cycles/Min.
PLC- control with
additional interfaces
