

**Special magazines for friction feeders**

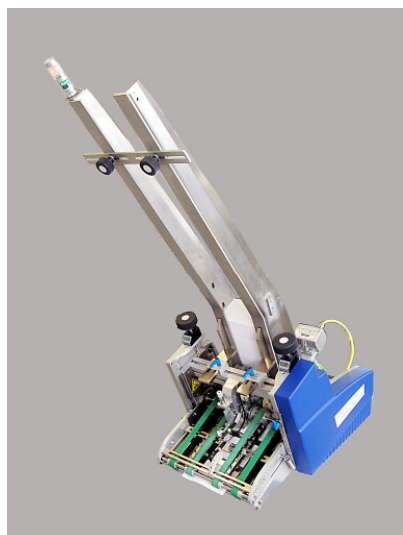

As the expert for feeding and collating systems, Köra-Packmat develops constantly new feeder options that are in accordance with customers' specific requirements.

Here are some examples of special magazines we realized for different projects:

Fan-magazine: perfect for the stacking and separation of products that are folded or boosted on one side like brochures, cartons, folded leaflets.

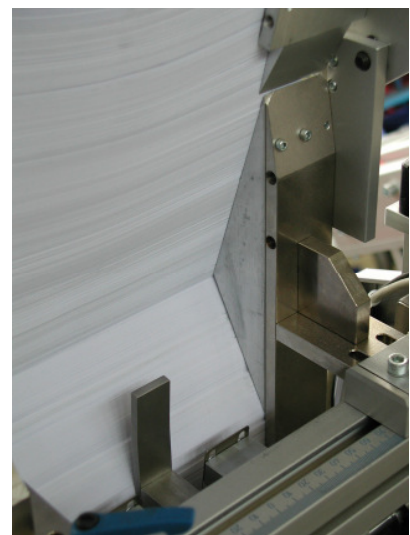

Overview
➤ Fan-magazine
➤ Bended magazine
➤ Multiple magazine
➤ 5-fold magazine
➤ Autoloader
➤ Patented 3-S-System

Bended magazine shaft to increase feeders' autonomy.

Discharge of the product stack.

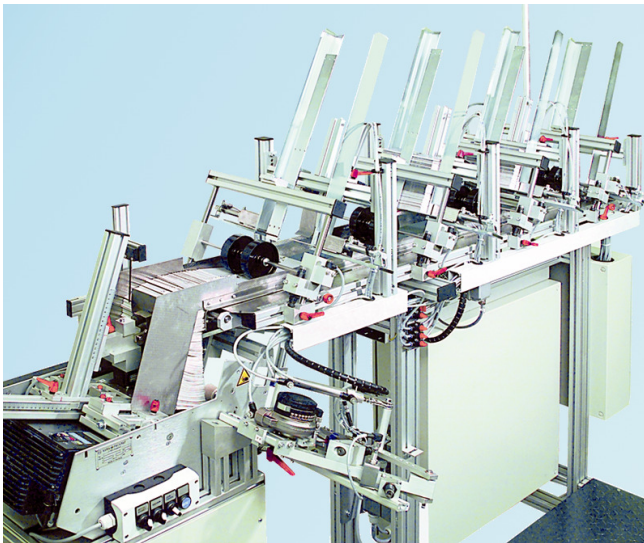

Tapered construction for additional discharge of the product stack.

This special construction takes away the weight of the stack so that heavy and large format products (A4) can be separated easily.

For Bosch Siemens we manufactured a feeder that is assembled with a multiple magazine where the shafts are built up consecutively.

→ Purpose: The magazines can be filled at the beginning of each production shift. The magazine shafts are emptied one after the next which increased the autonomy to such an extend that the feeder shafts only need to be refilled once in a shift in order to reduce man power.

Multiple magazine for small products (phone cards) to increase feeders' autonomy. The magazine is equipped with 5 shafts that are emptied automatically one after the next and convey the products to the feeder. The shafts are exchangeable so that they can be refilled „externally” without stopping the machine.

Autoloader / shingled placing of products (inline or 90°) on an autoloader to increase feeders' autonomy. The autoloader is available with different lengths.

We would like to take this opportunity to draw your attention once again to the unique Köra-Packmat 3-S-System and wish to concretize once more the advantages of the

**patented central adjustment system:**

This central adjustment system to different product thicknesses allows the fastest and combined automatic adjustment of all relevant parameters (air gap adjustment, exit extension and magazine shaft). Thus the scaled set up system for the product adjustment enables fastest changeover time for different products.

This unique feature of the Köra-Packmat feeder, available for the series AF AdvancedFeeder and BF BasicFeeder offers the maximum in terms of user friendliness and changeover times amongst all feeders available on the world market. This function therefore represents a unique sales argument vis-à-vis your customers and competitors devices.
